

Customizers of artificial silicone body parts (Prostheses)

The loss of a body part may have severe physical and emotional consequences for an individual. Unfortunately, many individuals with amputations stay away from public places, hide their residual part or even avoid employment opportunities due to their condition.

So, we create artificial customised silicone fingertip, finger, thumb, eye, ear, nose, partial hand, hand, toe and foot prosthesis for patients who have lost body parts and function due to:

Traumatic injury (accidents)

Surgery - cancer or tumor removal

Disease - such as diabetes and scleroderma

Congenital (by Birth) conditions.

*The only disability in life
is a bad attitude*

**FORGET THE
MEANING
OF CAN'T**

Our silicone prosthesis is:

- ☛ Medical grade & hypoallergenic.
- ☛ Stain proof.
- ☛ Flame resistant.
- ☛ Carefully sculpted, coloured.
- ☛ Life-like in texture, which allows restoring symmetry.
- ☛ Provide proprioception.
- ☛ Comfortable - it conforms to the user.
- ☛ Secured by vacuum or medical - adhesive.
- ☛ Repairable.
- ☛ Can be easily reproduced using patient's previous mould.

Basic skills, such as reaching for a glass, holding a pencil, and typing on a keyboard, can become daunting after a finger amputation. Silicone prosthetics restore the anatomical function and enable users to resume everyday living activities.

By restoring finger length, the prosthesis improves pinch force and grip and enhances oppositional function of the hand.

Loss of even a single toe impacts gait and may be associated with foot, knee and even hip pain. Well-designed toe prosthesis can help maintain the normal position of remaining toes and improve gait and comfort by restoring normal toe length.

The outer structure of a prosthetic ear helps direct sound into the ear canal. A prosthetic nose helps protect delicate mucus membranes and prevents particles from entering the body.

Silicone prosthetics can also be used as outer coverings for mechanical devices, such as myoelectric hand. These coverings improve grip and protect the inner components along with providing cosmesis.

The Silicone rehab

move ahead in life

A-44, GF, Rajlakshmi Complex, OP Road, Vadodara.

Monday to Friday 10:30 am to 1:00 pm & 2:00 pm to 5:00 pm

For appointment : +91-99243-03576 / +91-99090-28564
